

Claim 1. An attachment for an arrow rest attached to a bow,
said attachment comprising:
a first element,
said first element having a first end and a second end,
said first end of said first element having a weight attached thereto, and
said second end of said first element having means for securing said attachment to a bus cable of a bow,
a second element,
said second element having a first end attached to said second end of said first element, and
said second element has a second end having means for attaching said second element to an arrow rest.

Claim 2. The attachment as claimed in claim 1, wherein said first and second elements are unitary.

Claim 3. The attachment as claimed in claim 1, wherein said means for securing said attachment to a bus cable of a bow is a loop formed in said first element.

Claim 4. The attachment as claimed in claim 1, wherein said means for attaching said second element to an arrow rest is a loop formed in said second element.

Claim 5. The attachment as claimed in claim 1, wherein said first and second elements form a substantially 90 degree angle.
